

20-06-2020

- Initial release

28-06-2020

- Introduction
 - Added report structure description, minor grammar/wording changes, expanded slightly
- Background
 - Added new subsection with telemetry basics, describing a lot of the normal flow and processing of telemetry data
 - Added more info to HYPSON section, plus new more descriptive images
 - Added new images and expanded details about Open MCT
- Problem and scope
 - Grammar cleanup, added note about where test telemetry data comes from before launch in Q4 2020
 - Added note about HYPSON satellite not having continuous contact with ground station
 - Added note about why HYPSON would like to add more data sources to Open MCT at a later time, explaining why it needs to be taken into consideration during implementation
 - Added more information about what the system output needs to look like, and example telemetry output
 - Changed numbering of requirements, moved two misplaced requirements to functional requirements
- Design and implementation
 - Named the version of the design in this section as version 0
 - Named the system to be implemented MCT Depot, to make it easier to refer to and define - had a lot of back-and-forth about which implementation/system/module was being covered in the previous version of the report
 - Added new diagram showing overview of inputs and outputs to MCT Depot
 - Changed existing diagrams to refer to new name
- Results and discussion
 - Changes to account for system getting a name
 - Changed class diagram captions to explicitly refer to version 1.0
 - Added note about COVID-19 pandemic making lab access difficult hindering parts of the system from being done and tested properly
 - Added more information about the process of implementing the plugins and servers for Open MCT
- Conclusion
 - Expanded slightly, added conclusion for the implementation and design process and not just results

- Future work
 - Added note about writing documentation for using Open MCT
